on the basis of their relationship with prominences.
Observations were made, during the period of 1958-1960,
using a chromospheric telescope, a spectroheliometer,
and a microphotometer. The most effective method of
studying the dynamics of flares was found to be with
motion-picture photography. The observations show

A study was made of the mechanical properties of
polyhexamethylene adipamide over a wide range of
temperatures. Anomalies were found in the tempera-
ture dependence of the deformability and recrystalli-
zation stress in the interval 180 - 190°C. The anom-
alies are associated with the kinetics of crystalliza-
tion and recrystallization of the polymer. (Author)

transitions, Ionization, *Radiation effects, Phenyl
radicals, Radiochemistry.

Polyethyleneterephthalate on irradiation with fast
electrons goes over from the crystalline to the amor-
phous state. This amorphisation is associated with
the isomerization of certain portions of the polymer
